SUMMARY

Results-oriented and proactive Software Engineer, with hands-on experience specializing in full-stack development. Proficient in **Python, Java, Javascript, Typescript, Database** and **APIs**, with extensive experience in **AI integration** frameworks, **Cloud** Technologies and **version control**. Demonstrated expertise in working within **Agile** development environment, focusing on delivering practical, **production-ready** projects on time.

SKILLS

PROGRAMMING LANGUAGE: Python, Java, JavaScript, TypeScript, Swift, CSS, HTML, Node.js
DEVELOPMENT SKILLS: React, Tailwind, Django, Spring Boot, RESTful APIs, Figma, Swagger, Springfox, JMeter, Stripe, Auth0
DATABASE & CACHE: MySQL, PostgreSQL; MongoDB, Redis; MyBatis
CLOUD & DEVOPS: Kubernetes, AWS, Azure, Docker, Maven, Git, Cloudflare

WORK EXPERIENCE

 **Senstride – Software Engineer**

Melbourne, Australia Jul 2025 – Now

Designed and delivered end-to-end software products within a gait analysis platform to support fall-risk reduction for older adults and people living with Parkinson’s disease.

- Led 0→1 full-stack development of a data dashboard, delivering data visualizations and end-to-end user workflows.
- Designed core data models and database schema, ensuring scalability and query performance.
- Built a backend data access & transformation layer to optimized export queries for large dataset workloads.
- Built a context-aware alert explanation layer that retrieves structured data to generate actionable insights, reducing manual investigation effort.
- Delivered end-to-end AWS deployment and CD processes, including cloud security hardening and encryption.
- Drove performance improvements, reducing dashboard loading time by 60%–80%.
- Shipped 3–4 tickets per week in an iterative delivery cycle.

 **University of Melbourne – Software Engineer**

Melbourne, Australia Jan 2026 – Now

Built a full-stack GenAI-based learning platform to support personalised practice and teaching insights for university courses.

- Designed GenAI-assisted content generation workflows with retrieval-based logic to expand question banks while maintaining relevance and instructional alignment.
- Delivered student practice analytics (progress, weak areas, trends) and cohort-level insights to support targeted intervention.
- Implemented an event-driven backend (Spring Boot) using transactional outbox and RabbitMQ for reliable async processing and analytics updates.
- Containerised and deployed backend services on AWS ECS (Fargate) with ALB, ensuring scalable and reliable production workloads.
- Managed PostgreSQL schema evolution with Flyway and reproducible local infrastructure via Docker Compose.

 **Rhombus AI – Full-Stack Developer**

Sydney, Australia Feb 2025 – Jun 2025

Contributed to the development of a SaaS web app product , which allows users to build and automate complex data workflows through both drag-and-drop interfaces and natural language prompts.

- Delivered 15+ new features and resolved 35+ bugs to enhance the frontend interface and backend service.
- Implemented async tasks and API integrations to improve responsiveness and support AI processing workflows.
- Owned end-to-end 3rd party Integration services (Stripe and Auth0) for secure payments and authentication.
- Worked in a Kubernetes-based environment, supporting backend services and troubleshooting deployment and runtime behaviour.
- Resolved 3-5 tickets weekly, maintaining continuous delivery and rapid iteration.

PROJECT/ RESEARCH EXPERIENCE

Task Analysis Copilot – Project of Apromore – Full Stack Developer

Feb 2025 – Nov 2025

Built a GenAI-powered copilot for task mining, enabling natural language queries over employee interaction data to surface optimisation insights.

- Designed a multi-agent RAG workflow for query understanding, structured data retrieval, and insight generation.
- Implemented query rewriting to translate user intent into structured data queries across task datasets.
- Developed agent modules for data visualisation and insight generation, and integrated LangSmith for evaluation and monitoring.
- Built CI/CD pipelines for reliable releases.
- The project was recognized with the Unimelb Capstone Merit Award for it’s outstanding achievement and will be used in Apromore’s real-world products tracking.

VOLUNTEERING & EXTRA-CURRICULAR ACTIVITY

IEEE WIE AG University of Melbourne Student Branch – Vice-Chair	Melbourne, Australia	May 2024 – May 2025
- Organized and co-led 11 professional workshops and panels in collaboration with Engineers Australia, NAB, CSL, Telstra, and Canva, promoting diversity in engineering and sustainable development. Flagship events such as “Unlock Your Engineering Future (90%+ attendance; 98% participants reported career benefits) and “Building Resilient Careers” panel with industry leaders fostered discussions on leadership, workplace culture, and career resilience. - Recognized with the “Outstanding Event/Initiative Award 2024” for individual contributions, while the branch won the “Outstanding Student Branch WIE AG Award 2024” by IEEE Victoria, reflecting strong impact in student engagement and industry collaboration.		

AWARDS AND CERTIFICATES

CIS discipline Merit Award – The University of Melbourne	Oct 2025
<i>In recognition of outstanding achievement for my masters project in the field of CIS Engineering.</i>	
Outstanding Event/Initiative Award 2024 – IEEE Victoria Branch	Dec 2024
<i>In recognition of outstanding individual contributions for the event organization as the vice-chair of IEEE WIE AG Unimelb SB.</i>	

EDUCATION

The University of Melbourne	Feb 2023 – Nov 2025
Master of Software Engineering	
<i>Relevant Coursework: Object-Oriented Software Development, Distributed Systems, Database Systems, Software Design Architecture</i>	
Xi'an Jiaotong University	Sep 2018 – Jul 2022
Bachelor of Engineering Management	
<i>Relevant Coursework: Project Management, Probability Theory, Human Resource Management, Micro/Macro/Managerial Economics</i>
